

Cluster-forming $t > 3.98$ ($p < 1e-4$) · cluster-extent FWE $p < .05$

model7 · n = 58 · surviving extent, % of mask: RPE +37.5 / -0.1 uRPE +1.0 / -8.6 Surprise +0.4 / -0.0

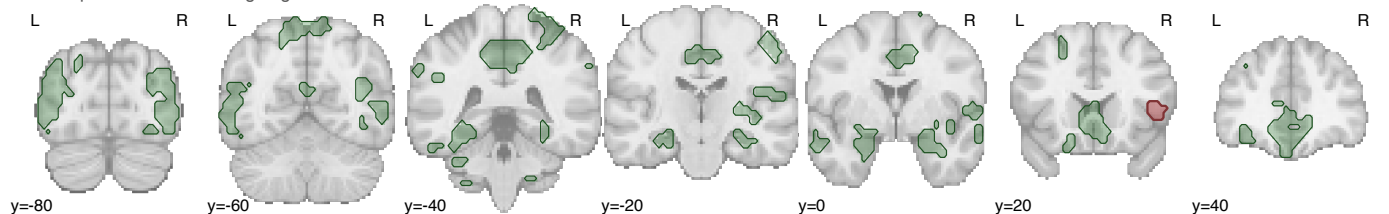

a Positive tails

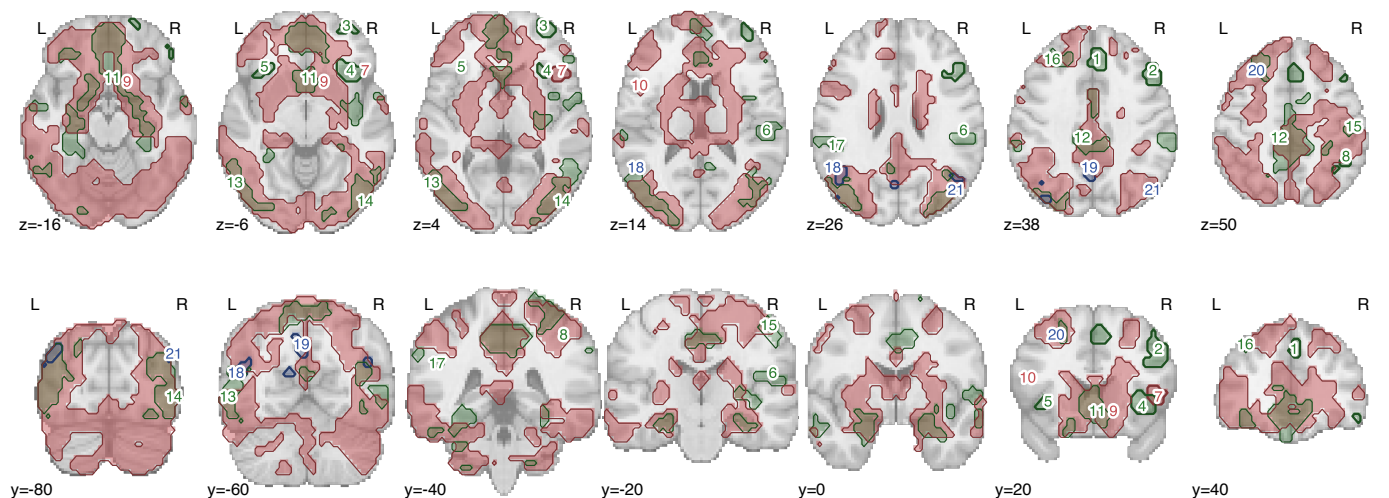

b Negative tails

Surprise has no surviving negative clusters here.

c Both tails together

The green of b sits on the red of a — the same territory carries a positive signed-RPE response and a negative unsigned one.
