

Accurate for 'attracts'

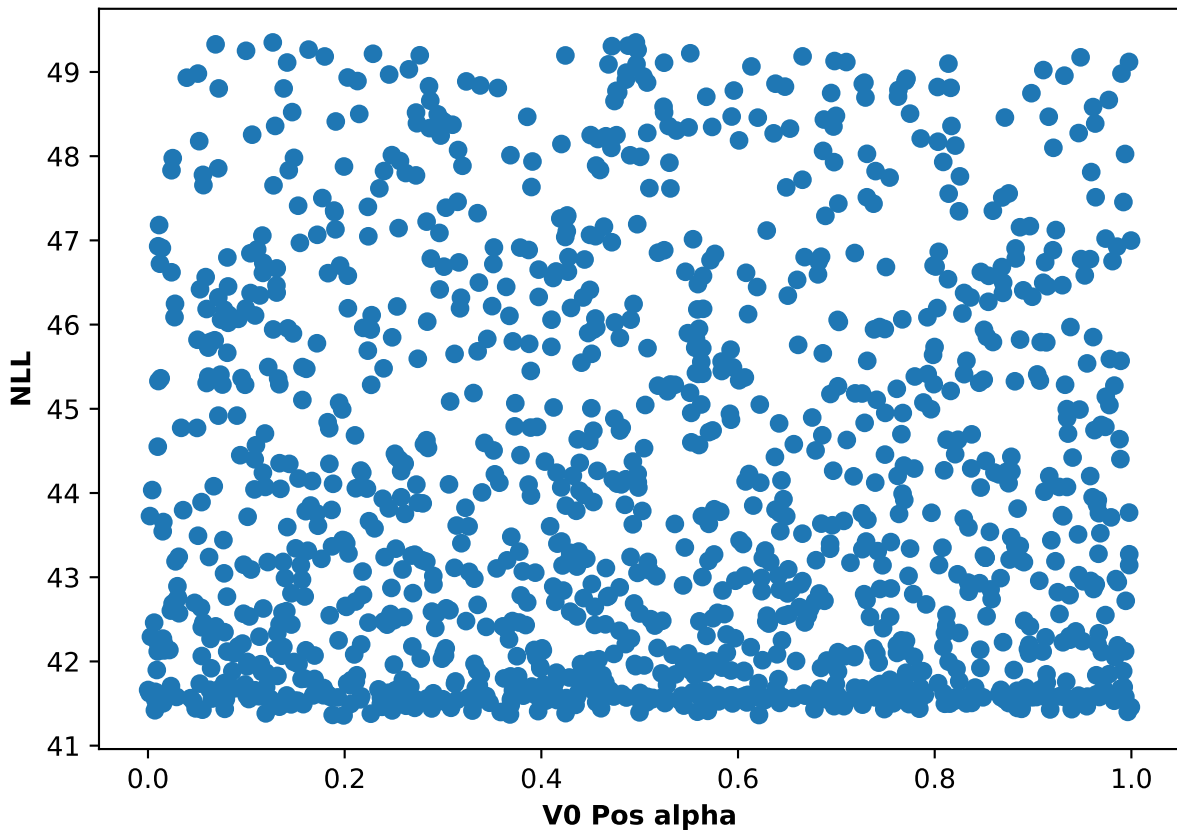

The graph displays the accuracy of a model over 55 iterations. The 'Real data' (blue line) is highly volatile, with accuracy ranging from 0.0 to 0.8. The 'Simulated data' (orange line) is smoother, with accuracy ranging from approximately 0.45 to 0.58. The simulated data generally follows the trend of the real data, providing a more stable representation of the model's performance.

Iteration	Real data	Simulated data
0	0.20	0.51
