

Each map: SnPM cluster-extent FWE survivors (cluster $p < .05$); columns 2–3 are direct contrasts between modulators.
Main-effect panels: light shade = $t > 3.1$ extent, saturated = the manuscript's cluster-forming threshold.

Signed RPE
(feedback-locked)

RPE > 0 ($t > 8.0$ on $t > 3.1$)

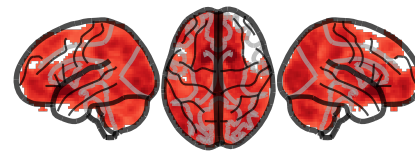

RPE > uRPE ($t > 3.1$)

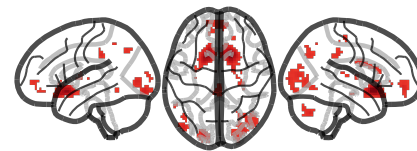

RPE > uRPE ($t > 8.0$)

RPE > surprise ($t > 3.1$)

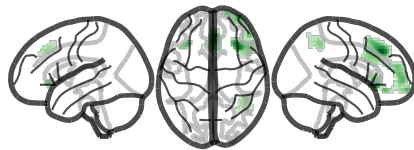

RPE > surprise ($t > 8.0$)

Unsigned RPE
(feedback-locked)

uRPE > 0 ($t > 4.0$ on $t > 3.1$)

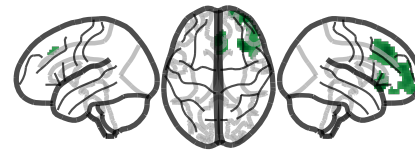

uRPE > RPE ($t > 3.1$)

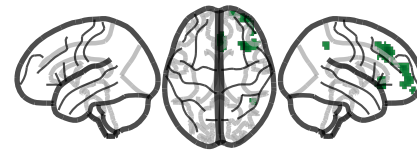

uRPE > RPE ($t > 4.0$)

uRPE > surprise ($t > 3.1$)

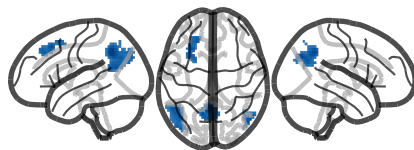

uRPE > surprise ($t > 4.0$)

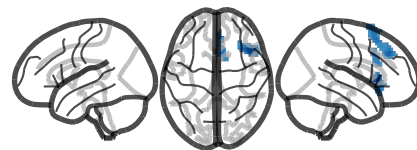

Shannon surprise
(stimulus-locked)

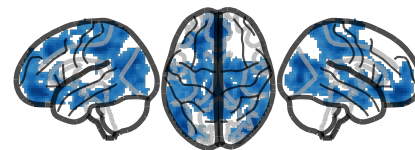

Surprise > 0 ($t > 3.1$)

Surprise > RPE ($t > 3.1$)

Surprise > uRPE ($t > 3.1$)

Main-contrast threshold
already $t > 3.1$ (see left)

Main-contrast threshold
already $t > 3.1$ (see left)
