

Cluster-forming $t > 2.39$ ($p < .01$) · cluster-extent FWE $p < .05$

model7 · $n = 58$ · surviving extent, % of mask: RPE +64.9 / -0.0 uRPE +2.2 / -30.3 Surprise +1.0 / -0.0

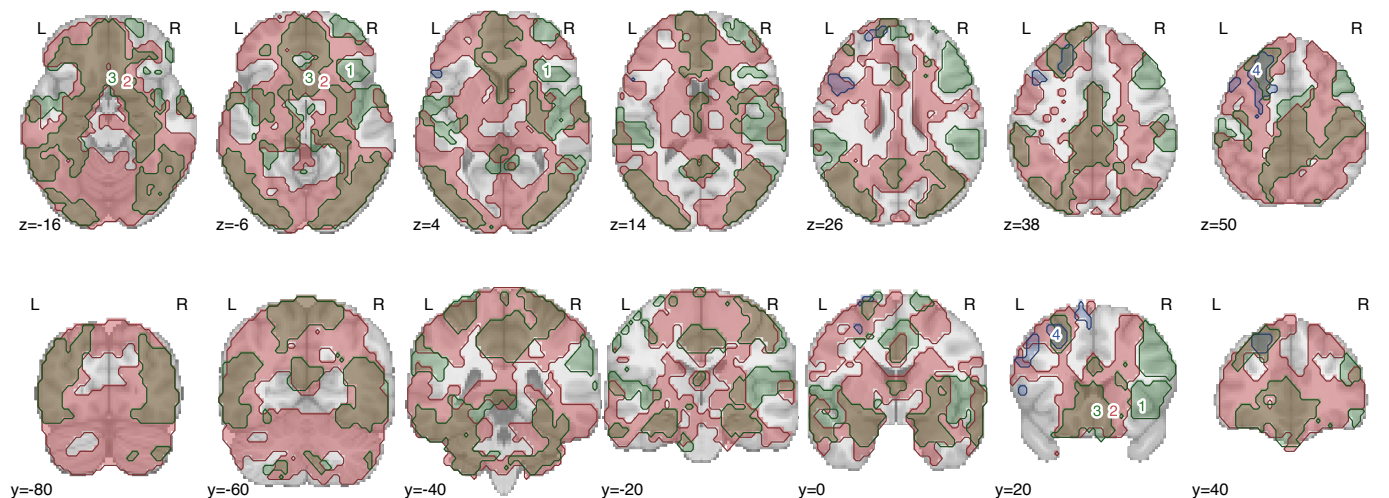

a Positive tails

b Negative tails

c Both tails together

The green of b sits on the red of a — the same territory carries a positive signed-RPE response and a negative unsigned one.
