

Cluster-forming $t > 2.39$ ($p < .01$) · cluster-extent FWE $p < .05$

model2 · n = 58 · surviving extent, % of mask: RPE +65.9 / -0.0 uRPE +2.2 / -30.3 Surprise +1.1 / -0.0

Clusters smaller than 25 voxels are not given a row in a; the extents in the header are the full maps, so a signal can be large here and absent from a (one confluent blob), or present as a map and too small to name.
