

Cluster-forming $t > 3.98$ ($p < 1e-4$) · cluster-extent FWE $p < .05$

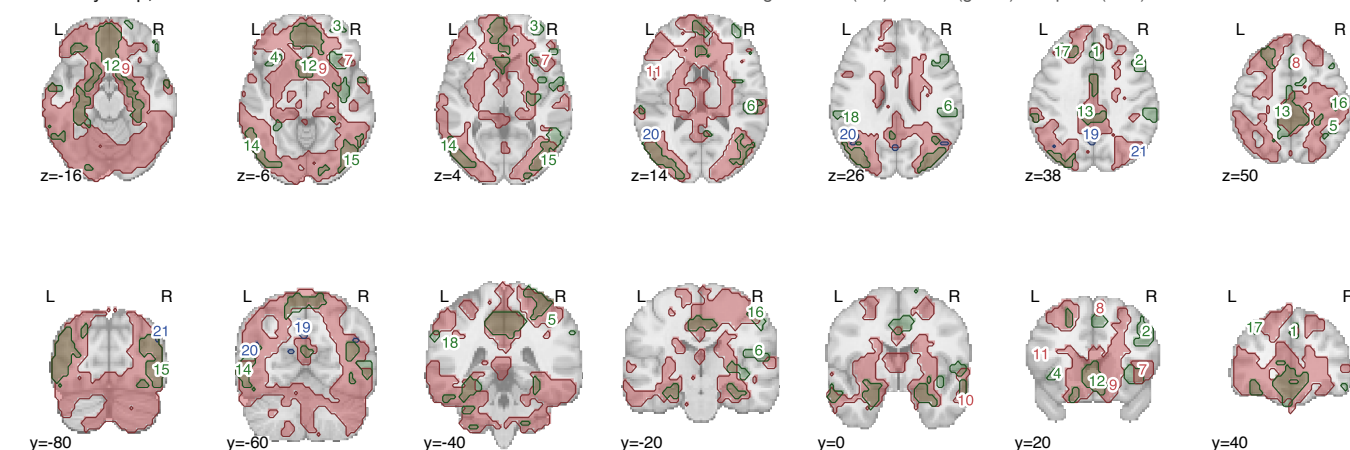

model2 · n = 58 · surviving extent, % of mask: RPE +41.1 / -0.3 uRPE +1.0 / -8.6 Surprise +0.2 / -0.0

a

b Every map, both tails

Signed RPE (red) · uRPE (green) · surprise (blue) · numbers mark the ROIs of a

Clusters smaller than 25 voxels are not given a row in a; the extents in the header are the full maps, so a signal can be large here and absent from a (one confluent blob), or present as a map and too small to name.
