

No cluster-forming threshold · TFCE, two-tailed FWE $p < .05$
 model2 · n = 58 · surviving extent, % of mask: RPE +48.7 / -0.0 uRPE +0.0 / -26.6 Surprise +0.0 / -0.0

a

b Every map, both tails

Clusters smaller than 25 voxels are not given a row in a; the extents in the header are the full maps, so a signal can be large here and absent from a (one confluent blob), or present as a map and too small to name.
